

Cabrini Malvern Gandel Wing

Cabrini Malvern's Gandel Wing has been designed to optimise patient comfort and is a major step forward for Cabrini in their continuous efforts to provide the best possible care. The building comprises of 11 floors including four basement levels.

The interior design challenges outdated operational norms to bring a new level of quality treatment, comfort and serenity to the patient.

The new wing includes a radiotherapy centre and a contemporary day oncology unit, expanded maternity facilities including additional beds, and an improved cardiac services unit to urgently treat issues of cardiac rhythm and cardiac failure.

The facility contains an improved emergency department, which will enable Cabrini Health to treat increasingly complex patient presentations, medical wards to treat stroke and infectious diseases, and a greater proportion of single patient rooms.

The inclusion of radiotherapy bunkers completes an integrated cancer care model and improve the patient experience - allowing patients to remain on-site for their entire treatment.

This project reached Practical Completion in mid-2019.
