

Deakin University Waurn Ponds IISRI Project Stage 2 Main Works

In late November 2018 after an extremely competitive six week ECI phase, Kane Constructions was awarded Deakin University's Waurn Ponds Institute for Intelligent Systems Research and Innovation Stage 2 Main Works project (IISRI).

The project at Deakin's Waurn Ponds campus consolidates staff from three buildings in different locations around the campus into a single purpose built facility.

The building is being used for 3D printing, prototyping, testing of robotics, neural and cognitive testing, and administration spaces.

This project reached Practical Completion in quarter four of 2019.
