

Emirates First Class Lounge, Sydney International Airport

Delivered by fixed price lump sum the contract works included new high quality joinery and fitout project over an 850m2 area within the Sydney International Airport.

All new electrical, hydraulic and mechanical services in the area had to be connected to existing Sydney Airport services.

A very tight program enabled the Emirates First Class Lounge to open in the 2006 New Year as promised.

Kane Constructions relationship with the client, understanding the needs of both the client and end user and the co ordination of tight security restrictions to complete the works enabled a successful completion of the project to the satisfaction of all.
