

Ithaca Creek State School, New General Learning Centre

Kane Constructions has been engaged for the design & construction of a new general learning centre facility within the existing and operational Ithaca Creek State School, located at Bardon in Brisbane's inner-western suburbs.

In addition to the construction of a new three-storey general learning centre, the project involves refurbishment of existing learning spaces within heritage-listed buildings.

Kane will be converting the spaces to new and improved learning spaces including staff offices and administration. The works involve protection of and specialist repair of existing heritage fabric including retrofitting new fit-out elements into the heritage space to create the new learning spaces. The new service runs for the learning spaces will pass through existing heritage fabric and coordination is required to ensure the services penetrations are accurate. The areas will require some compliance upgrades to ensure they meet current standards.

Kane will work collaboratively with the client and stakeholders to ensure minimal disruption to the operational facilities at the school for the duration of the works.

The project is due to be completed in the third quarter of 2021.
