

Lourdes Hill College Covered Sports Centre

Kane Constructions were engaged by Lourdes Hill College to construct a dual court multi purpose sports facility. The existing sports oval and single tennis court were cleared to make way for the new facility.

A state of the art Pulastic rubber sports surface was used, which can be safely utilised by the students all year round. Overhead is a single span Spantech roof structure which provides both protection from the weather and lighting for the facility.

As the project was located adjacent to one of the school's main entries, our team ensured minimal impact to both staff and students. Communication and flexibility were key, as was a high level of safety, as they were building within an operational school environment.
