

Melbourne Airport Domestic Checked Bag Screening

Expansion of the domestic Terminal 3 at Melbourne Airport including installation of a new baggage handling system with x-ray facilities. The project also included the construction of twelve new check-in counters.

Works resulted in a realignment of the airside boundary and required strict security protocols to be adhered to during construction.

Works commenced in early 2006 with the project completed in March 2007 including a comprehensive commissioning program for the baggage handling system.
