

The Church of Jesus Christ of Latter Day Saints, Car Park Extension Camp Hill

This project consisted of the demolition of an existing car park and fences, expansion into a newly acquired property, reinstatement of a new car park facility, new landscaping and boundary acoustic fences.

In addition to this new civil storm water infrastructure was constructed to suit the upgraded requirements of the new car park.

One of the primary challenges for the project was completing it within an existing and operational church environment and dealing with the church hierarchy, local council, patrons and other stakeholders was paramount to ensure a safe and efficient work site.
