

Deakin University Central Precinct Infill - Burwood Campus

Kane Constructions was appointed in August 2016 to deliver the Central Precinct Infill project for Deakin University at their Burwood Campus in Victoria.

This new precinct provides an energised, interactive destination for students, staff and visitors.

The precinct boasts a range of social and study areas, including approximately 250 informal learning spaces, and supports a connected experience via the integration of technology (including the installation of digital way finding screens).

The first stage of the project delivered a new steel and glass roof over the precinct, allowing light to cascade through the roof and illuminate the space below.

The stage 2 works consisted of:

- Installation of an environmentally responsive façade for the newly installed roof (allowing for optimal thermal comfort)

- Fit out of the plaza on level 2 (including a seating and stage area)

- Construction of the level 3 mezzanine (including a student community lounge and informal learning spaces)

- Construction of an additional pedestrian bridge (connecting the precinct to building P)

- Refurbishment of Deakin Central

The $10 million Lump Sum contract was completed in the first quarter of 2017.

Kane has delivered over 15 projects for Deakin University over the past 20 years.
